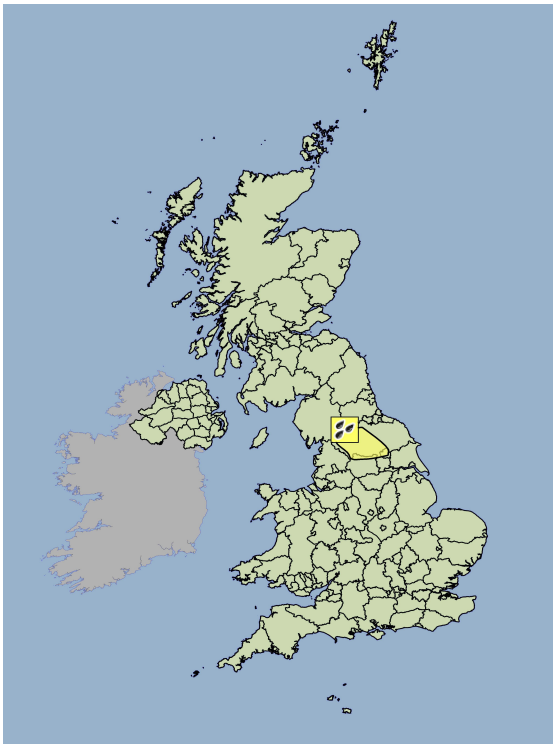
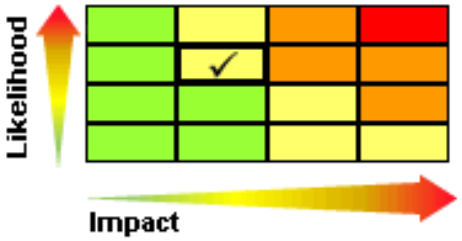
National Severe Weather Warning Service





Chief Forecasters Assessment
Following this weekends succession of frontal systems further rainfall is expected on Monday with warm air running in from the Atlantic. Much of the rain will be linked to the high ground of northern England with good shelter to the east. However, rivers are likely to rise in response to this rainfall and localised flooding is possible in the rain area as well as downstream in rivers flowing eastwards away from the Yorkshire Dales. The rain will ease on Monday evening but the risk of flooding will persist for a time as the water makes its way through the river system. Where the heaviest rain falls in western parts of Yorkshire localised flooding away from rivers is also possible.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **07:00 on Mon, 09th Nov 2015** until **21:00 on Mon, 09th Nov 2015**

Another bout of rain is expected to fall over western parts of Yorkshire through much of Monday, mainly over the high ground here with little rain to the east. Following wet weather over the weekend rivers are likely to rise in response to this rainfall with a low risk of localised flooding. With the rain falling on wet ground some localised flooding away from rivers is also possible.

The public should be aware of the risk. Further information around river flooding can be found from the Environment Agency.
